Summary

Full-stack software developer skilled in React, Node.js, and Flask, with strong problem-solving abilities and a solid foundation in Data Structures, DBMS, and OOPs. Experienced in building scalable web applications and machine learning models using Python. Passionate about developing efficient and user-friendly solutions.

Education

Jaypee University of Engineering and Technology, Guna	2023-2027
Bachelor of Technology in Computer Science	Guna,MP

Skills

Programming Languages:	C++, Python, JavaScript
Frameworks & Libraries:	React, Node.js, Flask, Bootstrap
Machine Learning:	scikit-learn, pandas, NumPy, Linear Regression
Databases:	MySQL, PostgreSQL, MongoDB, SQLite
Tools & Platforms:	Git, GitHub, VS Code, Jupyter Notebook
Core Concepts:	Data Structures & Algorithms, DBMS, OOPs, Problem Solving

Work Experience

Web Developer Intern – Vault of Codes (Remote)	Jun 2025 – Jul 2025
---	---------------------

- Built responsive **React components**, improving overall user experience across devices
- Integrated **REST APIs** using **Node.js** and **Flask** for seamless frontend-backend communication
- Used **Git** and **GitHub** for efficient version control and collaboration
- [Certificate](#)

Projects

Smart Irrigation	Live Demo
-------------------------	---------------------------

- Developed a smart irrigation system improving water efficiency by ~30% using ML predictions
- Used IoT sensor data (soil moisture, temperature, humidity).
- Trained ML models with **Python** and **scikit-learn**.
- Deployed using **Flask**.

Auto Mind – Car Price Prediction	GitHub
---	------------------------

- Built a car price prediction system achieving **85% accuracy** using **Linear Regression**.
- Utilized **Python**, **scikit-learn**, **pandas**, **NumPy** for data preprocessing and model training.
- Developed a **Flask-based web application** enabling real-time price prediction.
- Performed **Exploratory Data Analysis (EDA)** to identify key factors such as mileage, age, and brand impact on pricing.

Mental Health Support	GitHub
------------------------------	------------------------

- Developed a full-stack web application enabling secure doctor–patient interactions for mental health support.
- Implemented **role-based authentication** with separate dashboards for doctors and patients.
- Built **appointment management** and **real-time chat** using AJAX polling for communication.
- Integrated **AI-based emotion detection** using a **RoBERTa model** to analyze user sentiment.
- Added **prescription management**, UPI payment QR generation, and responsive mobile-friendly UI.

Achievements

- Solved **200+ DSA problems** across **LeetCode**, **Codeforces**, and **CodeChef** . [Profile Link](#)
- Secured **Top-5 position** at **IgnITION Tech Fest 2025 Hackathon**.
